505 regular sailings of British, German, Finnish, and Scandinavian lines. Of these may be mentioned the United Baltic Corporation, which maintains weekly services between London and Memel, Riga, and Tallinn.

504 The ports of Riga and Tallinn are blocked by ice in the winter months, especially February and March, but in each case channels for steamers are kept open by ice-breakers. While Latvia's trade is thus subject to disorganization, Liepāja and Ventspils are generally free of ice and consequently do a considerable trade in the winter, although accommodation in the ports is limited. Moreover, plans are at present being considered for the further development of a river harbour on the Lielupe at Jelgava. On the other hand, congestion in Tallinn can be relieved only by the use of the small ports of Narva-Joesuu, Pärnu, and Paldiski. Memel also is blocked by ice in winter, though an ice-breaker is used. Communication can, however, be maintained through the Latvian port of Liepāja. It may be mentioned that for some years the Lithuanian Government has been attempting to develop a small fishing village, Sventoji, near the Latvian frontier, with a view to providing an alternative port to Memel, though progress in this direction has not so far been great.

(2) *River Navigation*

133 Estonia has few navigable waterways, the Narva, which connects
● 489 Lake Peipus with the sea, being perhaps the most important. Both Latvia and Lithuania, however, possess rivers which are indispensable for the moving of timber. The principal navigable rivers in Latvia are the Daugava, the Gauga, and the Lielupe; in Lithuania, the Niemen (Nemunas). A canal joins the Niemen to the Bobr, which flows into the Narew, a tributary of the Vistula. The canal is, however, in Polish territory. The Berzune, a tributary of the Niemen, is also joined to the Daugava by a canal. Finally, it should be remembered that most, if not all, of the inland waterways of these countries are closed by ice for three to four months of the year.

(3) *Railways*

496 As already mentioned, the railway system inherited from Russia bore little relation to the new national requirements. For example, Russia had no object in linking Memel to Kovno, since Memel was in Germany, and Russia had built Libau expressly to be independent of German communications. Moreover, many of the lines were built (or not built) for purely strategic reasons, and nearly all were of the broad Russian gauge. It was natural, too, that they tended to radiate from centres in Russia with which, as has been seen, the Baltic States were to trade far less than before the War. Finally, the War had led to the wholesale destruction of stations, bridges, and other buildings, and even to the removal of locomotives and rolling-stock. Thus, the problems with which the new States were faced were considerable.

499 Reconstruction began soon after the War. In almost every case the
727 railways were taken over by the State. The amount of repairs which
